SUMMARY

This document explains the paper format for SSJW'08. We recommend to use LaTeX for typesetting of your manuscript with `IEEEtran-ssjw.cls`. The source file for this document can be a template file. This abstract environment generates a "Summary" heading. Please specify `onecolumn` option of `\documentclass`. For submission, only PDF is acceptable. Please embed all fonts in your PDF as possible as you can.

1) Do not exceed 30 MByte.
2) Do not make any protection for your PDF. All manuscripts are subject to be manipulated (to put page numbers, logo, etc.)
3) Even this style file produces letter size DVI file by default, please convert it into A4 PDF format. Do not use US letter format since the proceedings will be printed in A4 size. By using this class file, a wide bottom margin may be left, but this is regulated by the IEEE publication policy.
4) Embedding a multimedia content as an external link in your PDF is acceptable. Please make sure its existence and validity of contents.
